**SUBJECT:** Proper Mounting Positioning for Various Changer Brands in non-CDC Venders

Number of  
People  
Required

**MODELS:** Non-CDC Conventional Venders (GIII and Merlin IV) – **Australia only**

**TOOLS REQUIRED:** Phillips screwdriver

**ESTIMATED TIME:** <2 minutes

**INFORMATION:** The changer door in Australian non-CDC conventional-style venders (i.e., GIII and Merlin IV) has been redesigned to more easily accommodate Coinco, Cash Flow, and MEI changers. This redesigned changer door has two mounting screw positions for the different brands of changers. This Helpful Hint describes these mounting positions.

The following areas of this vender contain voltage which can cause serious injury or even death: the main power cord, supplying 115-230 VAC to the evaporator, EMI filter, and refrigeration system; the power line from the EMI filter to the ballast and transformer; and the ballast, which can produce upwards of 600 volts. Remove all power from the vender before working in any of these areas.

## DESCRIPTION:

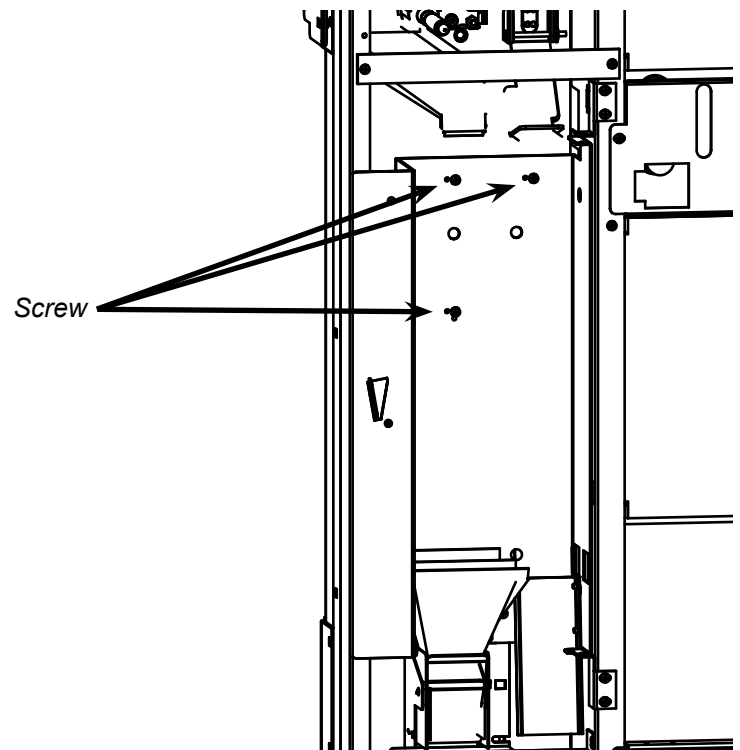

There are two different positions for the changer mounting. The right set of holes should be used for Cash Flow and MEI changers. The left set of holes should be used to mount Coinco changers.

To move the screws from one set of holes to the other, simply remove the screws using a Phillips screwdriver and install them in the opposite set.

As shown here, the screws are in the right set of holes, for installation of a Cash Flow or MEI changer.

Locations of the three screw locations in the door.

Left hole      Screw in right hole
