REVISION: 01

SUBJECT: Leveling leg adjustment to encourage water drainage to the rear of vender

of People
Required

MODELS: All Venders

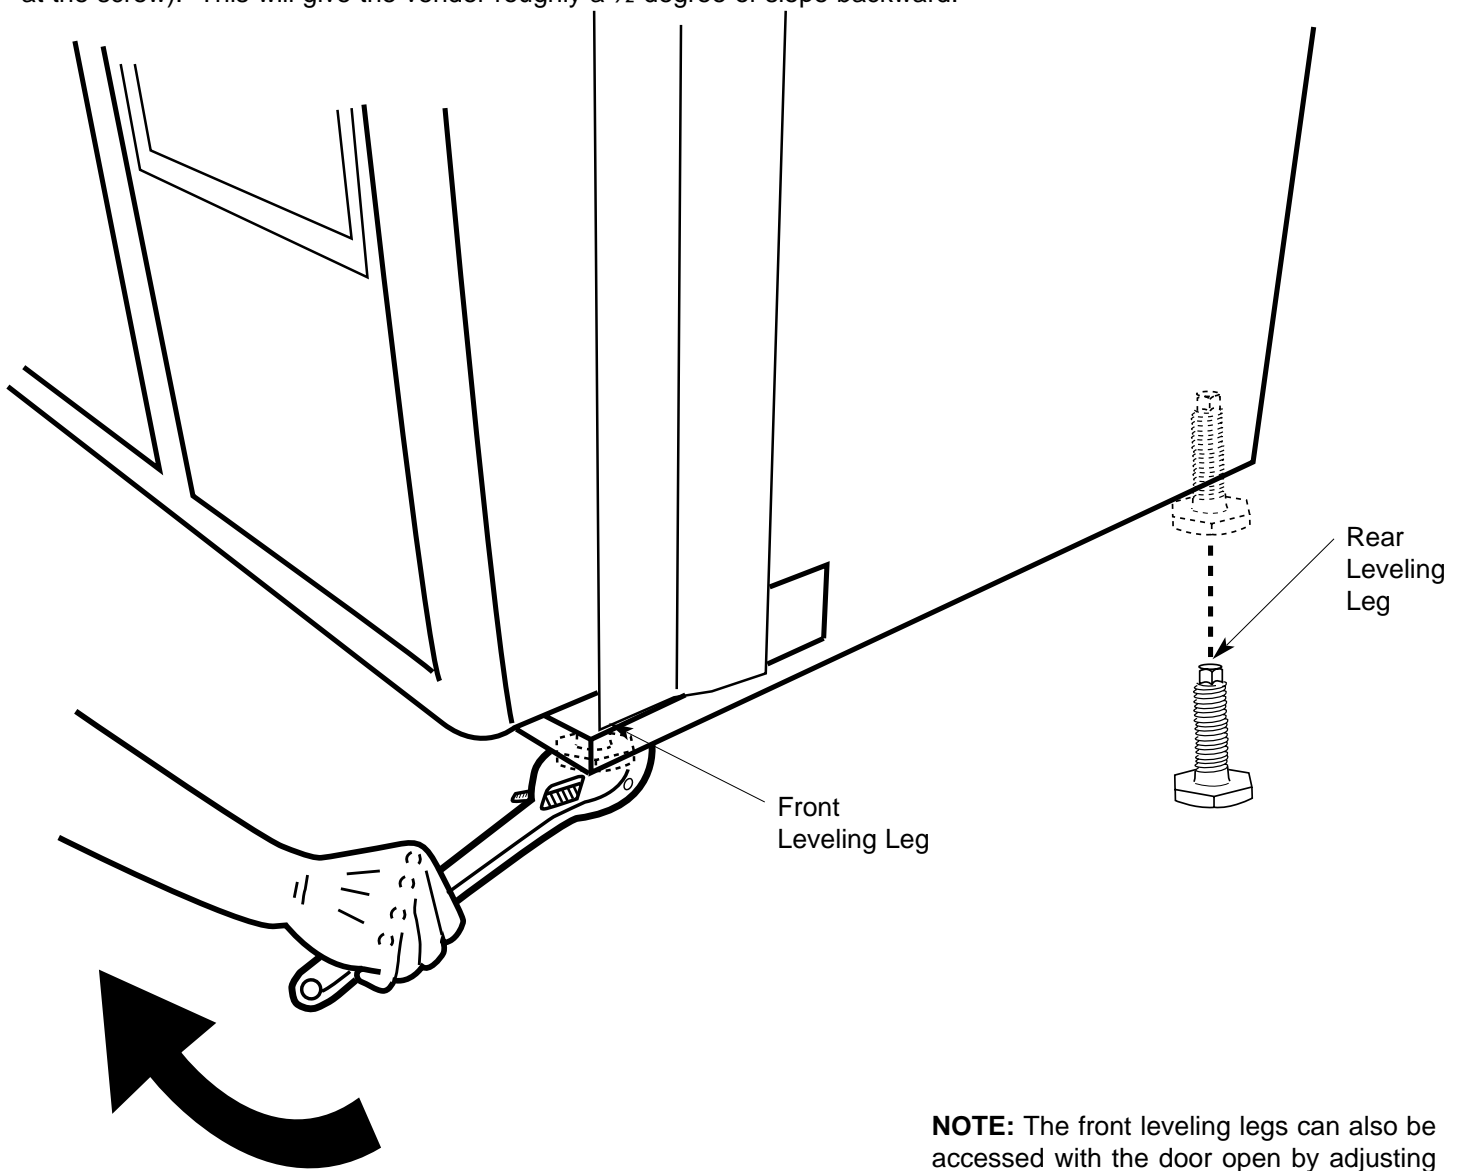

TOOLS REQUIRED: Adjustable wrench

ESTIMATED TIME: 3 minutes

REASON FOR HINT: To promote water drainage to the rear of the vender, instead of towards the door seal.

INSTRUCTIONS :

1. Make sure the vender is level by using a "bubble level" on the top and side of cabinet. Adjust the four leveling legs accordingly.
2. Then raise the front of the vender by giving each of the **front** leveling legs 8 quarter turns (clockwise as you look down at the screw). This will give the vender roughly a 1/2 degree of slope backward.

8 Quarter Turns (2 full turns)

NOTE: The front leveling legs can also be accessed with the door open by adjusting the top portion of the leveling leg bolt.
